

Important Notice for Boarding Clients: Bordetella Vaccine Requirement At Creature Comforts, we prioritize the health of all pets in our care. To ensure optimal protection against kennel cough, we **require** the Intranasal Bordetella (BV) vaccine for all boarding and day camp dogs every 6 months.

The IN BV vaccine offers superior protection by targeting the respiratory tract directly, leading to faster and more effective immunity compared to the injectable version. In addition it provides protection for 2 additional respiratory viruses; Parainfluenza & Adenovirus. Pets vaccinated with the injectable method are at a higher risk of experiencing prolonged coughing and symptoms if exposed to these respiratory diseases.
